**Subject:** Holy Trinity Cemetery-Radon System info request from homeowner

Floor plan of the home needed for the work up of the proposal from the system design and install company..

Basement description- is the floor all concrete or is it partial concrete and partial soil.?

Is the sump concrete or just a sump with dirt bottom.?

Are there any historical or existing water issues in the basement that we are aware of? Systems do not work well when waters are repeatedly encountered.

Is there a gap between the floor surface and wall? That would require them to seal it with special caulking..

Is there a radiant heating system in the floor?- If so-that is not an issue they just need to bring a infrared camera to locate the lines so they don't damage them.

Is there a crawl space under any portion of the home not in the basement area?
